
Introducing the ExpressScan Digital Film Scanner

With over 150 machines in active service, the **ExpressScan** film scanner has a proven track record of reliability and quality. These scanners are a great tool for converting analog workflow to a complete digital workflow. Photofinishers worldwide are using the ExpressScan to:

- Remove bottlenecks in workflow
- Create inexpensive redundancy to film scanning infrastructure
- Enjoy labor savings by dedicating a scanner to APS or 35mm workflow
- Index print scanning and/or CD burning

Express Film Scanner

- No other scanner gives the value of an ExpressScan™. The ExpressScan™ ES4B is a time-tested workhorse. Perhaps, you have a few in your lab already, or perhaps, you need a product to integrate film into your already entirely digital lab.

The ES4B can be upgraded to perform both high speed and/or 8Base scans.

Express Scanner Upgrade Kit

- Upgrade your existing ES4B units into the ES8B. Why start from scratch? By design the ExpressScan was developed to keep paybacks at an accelerated rate by helping you maximize what you already have in place. Get the latest software, the latest generation light source, and true 12 bit image capture in a swappable panel and go from 5,000 frames per hour to 12,000 frames per hour.

Workflow Solutions

"Twice the performance at half the price."

To help manage the increasing volume of digital work, **Express Image Manager** workflow software is a time saving compliment to your film scan workflow. This software can accept multiple inputs (Internet orders, digital re-order stations, etc.) and can be customized to output to any device (CD burner, digital printer, etc.).

- Understanding workflow and being able to tailor-make a process that suits the unique environment of a large, wholesale photolab, or a small minilab, is key. Take the guesswork out of queuing, reviewing, and setting up outputs for orders and rolls. Create customized folders, add logos and software applications specific to your lab with simple design templates. Specify a length of time to archive orders. Say goodbye to awkward databases, filing systems, clipboards, and spreadsheets.

Express Image Manager features an easy to use review station with a powerful output engine to efficiently correct and route orders to their desired destination. Features include:

- **Manual Auto Review** - Performs post-scanning processing of digital orders, including image adjustment, color correction, density, rotations, and deletions.
- **Flexible Output Protocol** - Customizes output folder generation, folder definitions, image renaming, and generates output control files to match your downstream process.
- **BMC/PfDF Interface** - Connects using BMC/PfDF protocols to easily capture order and batch information, customizes output and speed throughput.
- **Quality Monitoring** - Monitor scanner performance and image quality remotely. Creates customized reports.

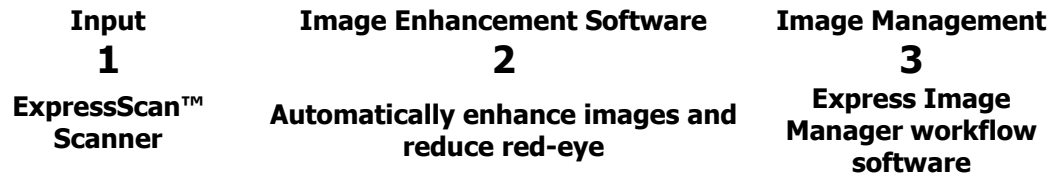

Express System Solutions

In today's digital market, photo finishers must start at the beginning to achieve quality digital prints and products. The Express System's easy to use digital fulfillment solution focuses on core combinations of software and hardware. Flexibility to move between digital and traditional film mediums is a necessity and a possibility. Amateur or professional, every customer order that comes through your door demands quality color throughout the entire

"Twice the performance at half the price."

production process.

The Express System Solution unifies multiple complex digital tasks into three basic steps using three major components.

The ExpressScan™ line of scanners has met the demand for digital images for years. Image enhancement technology is a must in today's scanning workflow and you will be amazed at the results of this color correction technology. Unify these products with Express Image Manager, a powerful digital image and output management software application. Digital fulfillment doesn't have to be difficult any more.

- **Operation Control** - Express Image Manager can be configured for simplified use (Review Window only) or can be unlocked for extensive supervisor control (System Window).
- **Order Control** - Set to processes order automatically, or easily initiate, view, reprocess, rename, or delete at the order, batch or image level.
- **Multiple Input** - Express Image Manager can handle the input from multiple image source. Each source can be prioritized automatically and can be assigned multiple customizable outputs.
- **Hotkeys and Output Templates** - Express Image Manager comes with multiple hotkey combinations already preprogrammed. However these settings are fully customizable. Design and define output folder elements, choose from the templates we provide or build and test your own

Sincerely Yours,

"Twice the performance at half the price."
